Hi,

dm4714 wrote:

My only opportunity now with the package is that the SQL Tasks has the hardcoded name and SQL statement that includes the database name. Does anyone know of an easy way to change this information?

Can I also use an INI file for this?

e.g. you can read the name from ini file and assign it to a global variable. Then use an activeX task to replace placeholders in the sql statements with this database name.
