I tried using the import wizard, importing a file based package and migrating an existing 2000 package. Is DTC required for importing into msdb? It seems that I can get this to work on a server machine, but not my desktop. DTC is the only thing so far I can find that is different.

This is on SQL2005.

When using the import wizard in SQL Server Management Studio, I get the following error:

Save to SQL Server failed.

No description found (SQL Server Import and Export Wizard)

=====

No description found

Program Location:

at
Microsoft.SqlServer.Dts.Runtime.Wrapper.ApplicationClass.SaveToSqlServer(IDTSPackage90 Package, IDTSEvents90 pEvents, String ServerName, String ServerUserName, String ServerPassword)
at Microsoft.SqlServer.Dts.DtsWizard.Execute.DoFileSaveStep(Exception& ex)

when importing a file package into the msdb, I get:

=====

Invalid access to memory location. (Exception from HRESULT: 0x800703E6)
(Microsoft.SqlServer.ManagedDTS)
