Hello mystical,

If permissions to the server logs are difficult to get hold of then why not log to a different medium? – text file is always good

Sysadmin on the server? Sysadmin is a SQL Server thing and does not really convey any rights over the Server itself.

Have a look here for some things around the event log and perms.

<http://groups.google.com/groups?sourceid=navclient&ie=UTF-8&rls=GGLG.GGLG:2006-22.GGLG:en&q=permissi>

What errors are you getting?

Allan

I setup a job to run a SSIS package but it fails due to errors. I want to look at the NT server logs but receive an access denied error. I am a sysAdmin on the server but have very few rights in windows (it is a production box).

What are the minimum permissions I need to be able to view the windows logs on the server so I can troubleshoot the SSIS errors or are there other methods to get at this data?

thanks
mp
