Do you need online replication or periodic data transfers?

wisdomforce fastreader works pretty fast for oracle data transfer both into MySQL or SQL Server. It does not even requires target to be online and creates loader script. Alternatively FastReader can write data into pipe in ASCII format that can be readed to load into target.

fastreader is not free though: www.wisdomforce.com

Hi,

I used to use DTS for transferring data between Informix and SQL Server and it worked very nicely. I now need to replicate data between Oracle and MySQL and need a similar tool. I can't use DTS because I no longer have SQL Server, and I can't use Oracle or MySQL's replication service, because they only work between 2 Oracle or 2 MySQL databases.

I don't need anything particularly sophisticated, just something which can copy data between an Oracle and MySQL database, and ideally is available free-of-charge.

Thanks in advance,
Don
