Hello Yoshi_DBA,

It would appear this area could mean a lot of things. A good place to start troubleshooting though is here

<http://tutorials.aspfqa.com/8000xxxxx-errors/why-do-i-get-80040e14-errors.html>

Step Error Source: Microsoft Data Transformation Services (DTS)
Package

Step Error Description: General error -2147217900 (80040E14).

Step Error code: 80040E14

Step Error Help File: sqldts80.hlp

Step Error Help Context ID: 5300

I receive this error when I run the DTS package. The following behavior is noted:

1. DTS package tends to fail only on monday mornings 2. At other times this package runs just fine.

* The mystery is why does it *often* but not always fail on monday morning with the above error message?

The DTS package is designed to import data into a table. It often fails on

the first step - It creates and makes calls to a COM object (Using sp_OACreateObject, sp_OA____, etc.) in order to iterate and normalize some

data before it gets written to the destination table.

But it can fail on other steps as well and the error codes are always

Re: General error -2147217900 (80040E14)

the

same no matter if it fails on the first or last step.

I believe I may have it narrowed down to the usage of the
SP_OACreateObject/SP_OAetc stored procedures (memory issue)

-OR-

It is interfering with some other System level process

-OR-

The amount of records that have to be iterated through may be causing
the

DTS package to bomb out (Hundreds of thousands of records iterated
through
and imported).

Thanks for any clues, insights, or answers!

Best regards,
