Hello Key,

So this error code as memory serves means Access Denied. This could be due to being unable to log in properly to the Sybase or SQL Server. It could also be around the Sybase Driver you are using. Does it run from the same location through the tools OK using the same accounts etc?

Does anyone know what this error code means and why it occurs?  
I'm getting it when running SSIS packages from a DOS script. The packages migrate data from SQL Server 2005 SP1 to Sybase. The error occurs randomly and often.  
Cheers.
