Charles,

Thanks for the quick response! Its very much appreciated. Unfortunately, I've been fighting fires all day and as a result I haven't had a chance to retest this issue. I'll let you know as soon as possible!

Thanks in advance !!

Hi Barry,

To let me better understand your issue, could you please describe your process more detailed so that I can reproduce your issue?

I performed a test at my side, however I could not reproduce your issue.

My

test process was as following:

1. Create a mapped drive Y: which mapped to drive D: on another machine.
2. Create a Execute SQL Task with the following SQL statement:
INSERT INTO item VALUES('A7',4,20)
3. Save the package to the mapped drive path Y:\Share\test.dtsx
4. Connect to SQL Server Integration Services from SSMS
5. Expand Stored Packages, right click File System, select Import package;
6. Select Pckage location as File System, select package path as Y:\Share\test.dtsx and input Pakcage name as test;
7. Connect to SQL Server instance from SSMS, expand SQL Server Agent, right click Jobs, click New Job...., input the job name, select Steps, click New..., input Step name, select Type as SQL Server Integration Services package, select Package source as SSIS Package Store, select Server, select Package as Test and click OK.

Re: SSIS – can SSIS pkg recognize a drive letter within SMS job?

8. Start the job and it worked fine.

The SQL Server Agent service account is a domain user which has full control on the remote share folder.

Please check my steps and compare with yours to see if there are some hints. If you have any other questions or concerns, please feel free to let me know.

Best regards,
Charles Wang

<http://msdn.microsoft.com/subscriptions/managednewsgroups/default.aspx#notifications>

If you are using Outlook Express, please make sure you clear the check box "Tools/Options/Read: Get 300 headers at a time" to see your reply promptly.

Note: The MSDN Managed Newsgroup support offering is for non-urgent issues where an initial response from the community or a Microsoft Support Engineer within 1 business day is acceptable. Please note that each follow up response may take approximately 2 business days as the support professional working with you may need further investigation to reach the most efficient resolution. The offering is not appropriate for situations that require urgent, real-time or phone-based interactions or complex project analysis and dump analysis issues. Issues of this nature are best handled working with a dedicated Microsoft Support Engineer by contacting Microsoft Customer Support Services (CSS) at <http://msdn.microsoft.com/subscriptions/support/default.aspx>.
