I see a lot of these in my Event log on the SQL Server for my Windows Sharepoint Services site.

It would be nice to know what files are not being indexed and why.

Posting in the WSS group got me advice to update to SQL Server SP3 (done at install) and/or post here.

Event Log Messages:

One or more documents stored in image columns with extension 'xls' did not get full-text indexed because loading the filter failed with error '0x1'.

Note: These documents will not be passed to MSSearch for indexing, and therefore this failure will not be reflected in the end of crawl summary statistics.

For more information, see Help and Support Center at

<http://go.microsoft.com/fwlink/events.asp>.
