Hi Alan

I usually enable fulltext indexing on a table with the following template:

```
USE MyDatabase
EXEC sp_fulltext_database 'enable'
EXEC sp_fulltext_catalog 'MyTable_Fulltext', 'create'
EXEC sp_help_fulltext_catalogs 'MyTable_Fulltext'
EXEC sp_fulltext_table 'MyTable', 'create', 'MyTable_Fulltext',
'MyTable_PK'
EXEC sp_fulltext_column 'MyTable', 'MyBinaryColumn', 'add', 0,
'MyFilenameColumn'
EXEC sp_fulltext_column 'MyTable', 'MyTextColumn1', 'add', 0
EXEC sp_fulltext_column 'MyTable', 'MyTextColumn2', 'add', 0
EXEC sp_fulltext_column 'MyTable', 'MyTextColumn3', 'add', 0
```

(note: google will wrap lines 5 & 6)

Using this, it's up to you to specify which columns are indexed.

Jack
