I'm guessing you want to import dts packages into MSDE (if not my appologies).

you can save the package as a structured storage file and use a little vb app to load the package in memory and then save it to the msde using SaveToSQLServer function of the package class ?

If you have a SQL Server then you can also use enterprise manager to simply save the DTS packes directly to your msde instance.

Hope this helps.

Ranjeet.
