Dear ladies and gentlemen,

Upscene Productions is happy to announce a new version of the database developer tool:

"Advanced Data Generator" (version 1.1.0)

A fast test-data generator tool that comes with a library of real-life data, presets and much more.

This new release consists of four versions:

- Pro: ADO and ODBC connectivity
- InterBase Edition
- Firebird Edition
- MySQL Edition

More info and a 30-day trial version on www.upscene.com

Pricing information available on www.upscene.com/purchase.htm#adg

Recent changes:

V1.1.0

- New: Ability to copy a (generated) value from another column in the same table
- New: "Masked Values" can now include values from custom text files
- New: "Masked Values" can now include sequential values with optional leading zeroes
- New: "Masked Values" can now include random numbers
- New: ability to create 1-1 relationships in addition to 1-n
- New: ability to select values from lists/values random/sequential/unique
- New: ability to use a VIEW as the source for referential links
- Enhancement: Used SQL statement logged (useful for error tracking)
- Enhancement: changed "referential data" retrieval to allow multi-column FKs with "sequential" values selection

microsoft.public.sqlserver.msde: ANN: Advanced Data Generator 1.1.0 released

- Enhancement: several small GUI enhancements
- Fixed: (Pro) delimited identifier problem with MS Access
- Fixed: problem with UK street names
- Fixed: Windows XP and Outlook–bar non–display of images
- Fixed: several minor GUI issues

With regards,

Martijn Tonies
