if somedomain\testuser is member of BUILTIN\Administrators the he/she is for
sure member of sysadmins (local) server role..

he/she will not become owner of the attached database, as the owner will
remain the original one, but he/she will be able to create new databases as
long as attach detached ones...

usually it's not a good idea to log on as (local) admin on client pc
workstations too :D
