I've installed a new instance of MSDE (SP4) on a test PC. Now I try to install SQL Server CE 2.0 (filename – sqlce20sql2ksp4.exe) and it complains about being able to install only with SQL Server SP1 or higher. Will Sql Server CE not install with MSDE and only SQL Server? What would I need to do to get SQL Server CE to work with MSDE?

Thanks in advance for any insight!

Dave M.
