What kind of messages are you getting when you attempt to register the server?

What messages in the event log? The SQL Server log?

I am trying to setup a user to access the BEDB database that gets created on a veritas backup exec 10.0 box so that I can pull data from the db. From what I can gather it uses a MSDE to run the db, its creates its own instance when the veritas software is installed and I have tried:

<http://support.microsoft.com/default.aspx?scid=kb:en-us:285097>
which in my case was close but was already set to 2. (services have been restarted as needed)

I have also used a full install of sql server using enterprise manager to turn the access to mixed.

Is there any steps I am missing to create this user so I can access the db?
