Hi all,

Just wondering if someone can help me with some data I am trying to separate out, the examples are shown as below

Clarice Apartment – 2 bedroom Apartment
The Beech – 4 bedroom Detached

What I want to say is everything before the first (–) is one column, then what is after the (–) but before the last SPACE is another column and what is after the last space is another column, it should end up looking something like this

Field Headings NAME Bed Type
Clarice Apartment 2 Bedrooms Apartment
The Beech 4 Bedrooms Detached

If anyone could help I would be grateful.

Thanks Phil
