Let me try to explain:

I am compiling information about tenants that is stored in a few different tables and populating a new table with the gathered data. So the processes is as follows –

1. read in a record from the SourceTable
2. assign the variables
3. write the data into the DestinationTable using the assigned variables

So the Names are coming from an existing table. I can not easily change D'Angilo to D"Angilo.

Thanks again for your help.
