Charles,

On the first error, if you have a DSN for your connections, you need to have that on the box where the DTS package is running. The problem is generally from having something in the connections that you had setup on the box where you developed the package but it is missing from the location where the package is running.

In terms of the second error, you are importing the data into a table named ITEMS. The task is set to create the table. If you run the package more than once against the database, the task is trying to create the table again but the table already exists. You need to modify the task to check for existence, truncate the table if needed. Or just create another Execute SQL task to drop the table before executing the task to populate the table.

Hi Sue,

The 2 types of errors I get are:

DTSRUN OnError: Copy data from ITCOUNT to [master].[dbo].[ITCOUNT]
Step,Error=-2147467259 (80004005);
Error String:[Microsoft][ODBC Driver Manager] Data source name not found and
no default driver specified.

and

DTSRUN OnError: Create Table [master].[dbo].[ITEMS] Step,Error=-2147217900
(80040E14);
Error String:[Microsoft][ODBC SQL Server Driver][SQL Server]There is already
an object named 'ITEMS' in the database.

Re: Help with dtsrun and dts package.

Thanks, Charles.

Okay...so now the package runs but the package itself has errors. What exactly are the errors?

Sue, thanks for your response. The first problem was the /S etc.. I

thought

you had to specify the Server and Username.

Dtsrun now runs but I am getting errors.

'All' I want to do is to export data from an Microsoft ODBC dbase

database

to MSDE.

What I have done is create an SQL database, imported the odbc dbase stuff

into it, and now I am trying to export this new SQL database to a

structured

file dts package and import it into MSDE.

Is there a way that this can work? or is there an easier more direct way?

Thanks,
Charles.

You want to use the /F option instead /S /N etc and then put

Re: Help with dtsrun and dts package.

in the file name with full path to the DTS structured storage file. Something along the lines of:
dtsrun /F"C:\SomeFolder\SomePackage.dts"

Hello,

I used SQL Server Enterprise Managers' Export Wizard with destination

ODBC

driver for SQL to create a dts package in the structured file format.

I entered the following dtsrun line (msde 2000 sp3)

```
dtsrun /S servSQL /U sa /P  
thepw /N db.dts
```

and received the errors shown.

```
Error: -2147217900  
(80040E14); Provider Error:  
1462 (37B6)  
Error string: The specified  
DTS Package  
(Name='db.dts';ID.VersionID={ [not  
specified] }. [not  
specified] }'
```

does

```
not exist.  
Error source: Microsoft  
OLE DB Provider for SQL  
Server
```

Re: Help with dtsrun and dts package.

What am I doing wrong?
Any help would be
appreciated.

Thank you.
