Suddenly my cubes connected to a Microsoft Access '97 database will not process. When I test the connection to the database, it tests fine. I can see the underlying tables in cube editor. I compacted and repaired the Access database. But I am still getting the message "Cannot open database". It may not be a database that your application recognizes, or the file may be corrupt."

I haven't found solutions or explanations so far in my searches. Has anyone else experienced this? How do I fix it?
