Ok this is an awesome, awesome reporting tool. If my repository ever gets seriously damaged, I have documentation that would help rebuild it. The only thing that's missing is the ER diagram.

Here's are things I will (someday) change:

- It generated 500 pages of doc – so I'll probably remove most of the carriage returns.
- Even though I told it to ignore 1/2 dozen cubes, it still included them in the dimension listing. -- I'll have it ignore dimensions from cubes that I'm ignoring!
- There is no mapping of what dimensions are used in what cubes -- only what cubes use what dimensions. -- I'll add the opposite mapping as well.
- It gives me an error message "This is not a valid action for the end of a row." (I somehow got past this) -- Hope to fix that bug.
- It then generated some weird looking stuff at the end. -- probably due to the above bug.

But, hey, I now have some automated documentation!

Nice job, Microsoft.
