One way is to use the SQL Server Profiler app, which lets you trace MDX queries going to SSAS.

Ok, so the cube browser tab in Analysis Server 2005 is nice, but how do view the MDX query that it ran to get the data that is displayed? I'm new to MDX, and just to be able to see the query would help me immensely. I don't understand why I can't find it...and if it isn't there, why in the world would they not have allowed you to see it?
