I can no longer connect to the AS with Analysis Manager. When I try to connect, I get the error message, "Cannot connect to the repository. [Microsoft][ODBC Driver Manger] Data source name not found and no default driver specified."

Meta data repository is msmdrep.mdb by default, but everything is XML string.

If you access meta data, DSO programming is required.

Why don't you use copy & paste or archive & restore instead?

Ohjoo
