Hum...

<http://support.microsoft.com/kb/912017/en-ussays> if you don't have enough memory, the connection may fail

<http://www.microsoft.com/technet/prodtechnol/sql/bestpractice/CISQL20...>
gives you scenarios

ensure you have the SQL Browser started on XP if you have a named instance.

and try to access your cube with excel and/or test with a .UDL file, it will give you other error messages to test

finally, I really like this resolution from microsoft
:<http://technet2.microsoft.com/Office/en-us/library/5a286d02-2ddb-4a48...>
(thanks google)

cause "the server is not running", resolution "start the server" ... :D

Hope that helps

Hi, I have SQL 2005 Analysis Services running in a WXP Pro SP2 machine.
The security in this server is "Everyone" and "guest".
Then in other machine (Windows Server 2003 SP1) I have installed "SQL Server Management Studio".
When I try to connect to the database server (SQL Server 2005), I have no problem. I can connect perfectly.

Re: Cannot connect to AS2005 remote server

But, when I try to connect to the AS2005 server from SQL Server Management Studio I get this error message:

Error detail:

TITLE: Connect to Server

Cannot connect to SERVERNAME.

ADDITIONAL INFORMATION:

A connection cannot be made. Ensure that the server is running.
(Microsoft.AnalysisServices.AdomdClient)

Unable to read
