SQLCE Push pb

I have a VB.net compact framework program written in VB. Net on a pocket pc 2003 that uses a SQL CE database.

I'm using RDA to sync the ce db with a sql server db.

I have SQL Server tables with "dbo" owner and some have specific owner.

The tables with owner "dbo" are sync with no pb – the pull and the push go perfectly.

But I get some pb to push the tables defined with a specific owner (not dbo).

The Pull was working fine – We named the table including the owner, like this "CC.CC_ACCOUNTS". The CC. is the owner.

But when I try to push these tables back I get this error:

Table cannot be opened [,, Table Name ,,]

However if I go into Query analyzer on the device I can open the table

and perform operations.

Anybody know why this is happening?

I found this at

http://msdn.microsoft.com/library/default.asp?url=/library/en-us/sqlce/h tm/_lce_errors_client_agent_errors.asp

microsoft.public.sqlserver.programming: SQLCE Push pb on VB.Net Compact Framework

error description

parameters error

28567 The table cannot be opened. P3: Table name

SSCE_M_OPENTABLEFAILED

but I can't find anymore info

Can anyone help me?
