I need a field that will hold a bunch of text.

I tried TEXT and also NTEXT without success.

I'm using MS Access as a front-end.

Currently, I'm trying to paste 2000 rows and 140,000 characters.

I know I will have more though.

My references say I should be able to hold 2GB+.

I'm getting an error "the text is too long to be edited".

What field type should I be using?

thanks
