Hello,

Can someone help me with a SQL statement that returns either email from Table A or email2 from Table B based on the following logic: if the email is found in Table B then email2 is returned/used from Table B otherwise email is returned/used from table A. I.E

Table A Table B

email="mail@mail.com" email="mail@mail.com"
email2="newmail@mail.com"

Here email2="newmail@mail.com" should be returned from query

Table A Table B

email="mail@mail.com" email="no@mail.com"
email2="newmail@mail.com"

Here email="mail@mail.com" from Tabel A should be returned from query

Thanks in advance

Cheers

Henrik
