Hi all

I insert data into table A through an asp page which executes encrypted sp for inserting data. I worked fine till i used a trigger on the same table which uses xp\_send mail for insert, upate.

the following scenareos occur

1.when i remove the trigger, data is getting inserted from asp form. on the otherhand when trigger is added, data is NOT getting inserted from asp and some syntax error in asp in shown.

2, however, I could insert data by executing stored procedure from access front end which means error occurs only in asp

should i use set no count on in sp/trigger

my trigger code is :

```
CREATE TRIGGER MAILSENDING
ON dbo.OnlineGH
AFTER INSERT,UPDATE
as
DECLARE @mailname varchar(100),
@subject varchar (250),
@message varchar (250),
@STATUSNAME varchar (250),
@STATUS int,
@tempsubject varchar(250),
@tempmessage varchar (250)
SELECT @STATUS = [Status ID], @mailname = Email FROM INSERTED
SELECT @STATUSNAME = @StatusName from statustable WHERE StatusCode = @STATUS
SELECT @tempsubject = 'Your status of Request for accommodation at IICT'
SELECT @tempmessage = 'Your request for accommodation is ' ++ @STATUSNAME +
'for further information visit www.iictindia.org using your check status
idno:'
EXEC master.dbo.xp_startmail
EXEC master.dbo.xp_sendmail @recipients = @mailname
```

microsoft.public.sqlserver.programming: xp\_sendmail in trigger from asp page –error

```
,@subject = @tempsubject  
,@message = @tempmessage  
EXEC master.dbo.xp_stopmail
```

Any Help will go along way in finishing my small application

R.D
