Hi Luqman,

No, you can't, unless it is still in the undo buffer of Query Analyzer.
This is functionality of QA, though – not of the core server.

If you already had a profiler trace running when you submitted the query,
then you could find the query there.

*>2ndly when I close the query analyzer window, it says, you have uncommitted

I think you can cancel the close operation (not sure, though, and I can't
experiment now). Then, close the windows in QA one by one. Each window
that has an open connection will ask you to commit or rollback.

Best, Hugo
