Hi

i've created stored procedure in

sql server 2000 which returns a value

see the stroed procedure

```
CREATE PROCEDURE QA_Select_AdminOrRec
@Role varchar(50),
@username varchar(50),
@pwd varchar(50)
```

AS

```
if exists (select * from
```

```
QA_Admin_Recruiter where role = @role
```

```
and username=@username and pwd=@pwd)
```

```
return (1)
```

```
else
```

```
return (0)
```

```
GO
```

and in asp.net i called this stroed procedure like this

```
Dim username As New OleDbParameter
username.OleDbType = OleDbType.VarChar
username.Value = txtUserName.Text
```

```
Dim pwd As New OleDbParameter
pwd.OleDbType = OleDbType.VarChar
pwd.Value = txtPassword.Text
```

```
Dim role As New OleDbParameter
role.OleDbType = OleDbType.VarChar
role.Value = Session("user")
```

microsoft.public.sqlserver.programming: how to check return value of stroed procedure

```
cmd.CommandText = "QA_Select_AdminOrRec"
```

```
    cmd.Parameters.Add(role)  
cmd.Parameters.Add(username)  
    cmd.Parameters.Add(pwd)
```

```
    cmd.ExecuteNonQuery().
```

here i've to check the value returned

by stored procedure.

can anyone tell me how to write code

to capture a value which returned by

the stroed procedure.

thanx in advance

yoshitha
