I use this to script out my system, change the servernames and job owners if they haven't been set to 'sa' then it is ready to go. I don't usually script out the jobs as I don't usually change the standard replication jobs (these aren't the agent jobs).

I also use an activeX task in DTS to schedule scripting out the system each evening, just in case (script below).

Cheers,

Paul Ibison SQL Server MVP, www.replicationanswers.com

(recommended sql server 2000 replication book:

<http://www.nwsu.com/0974973602p.html>)

' Visual Basic ActiveX Script

Function Main()

Dim objDMO

Dim objReplication

Dim fso

Dim tf

Set objDMO = CreateObject("SQLDMO.SQLServer")

Set fso = CreateObject("Scripting.FileSystemObject")

objDMO.LoginSecure = True

objDMO.Connect "crazyfrog"

Set objReplication = objDMO.Replication

Set fso = CreateObject("Scripting.FileSystemObject")

Set tf = fso.CreateTextFile("c:\testfile.txt", True)

tf.Write objReplication.Script(1048576)

tf.Close

Main = DTSTaskExecResult_Success

End Function
