Hi,
Following is the code snippet

```
class RDA
{
private static string _serverName = "seed";
private static string _databasePath = @"My Documents\rda.SDF";
private static string _localConnectionString = "Data Source=" +
_databasePath;
private static string _internetUrl =
"http://seed/sharefolder/sqlcesa30.dll";
private static string _remoteConnectionString="Data Source=seed;Initial
Catalog=AdventureWorks;User ID=sa:Password=P@ssw0rd";

public static void Main(string[] args)
{
try
{
MessageBox.Show("Starting Pull", "RDA Lab");
Pull();
//
}
catch (SqlCeException ce)
{
ShowErrors(ce);
}
catch (Exception e)
{
MessageBox.Show(e.ToString());
}
finally
{
MessageBox.Show("Pull and Push Complete", "RDA Lab");
}
}

private static void CreateDatabase()
```

pull method

```
{  
// Create a local database  
if (System.IO.File.Exists( databasePath))  
{  
System.IO.File.Delete( databasePath);  
}  
SqlCeEngine engine = new SqlCeEngine( localConnectionString);  
engine.CreateDatabase();  
}  
  
private static void Pull()  
{  
// Pull down the authors table from the pubs database on the remote  
server  
CreateDatabase();  
SqlCeRemoteDataAccess rda = new SqlCeRemoteDataAccess( internetUrl,  
localConnectionString);  
  
rda.Pull("ContactCE", "select FirstName,Lastname from  
Person.contact", remoteConnectionString,  
  
RdaTrackOption.TrackingOn);  
  
rda.Dispose();  
}  
  
}  
The error encountered is Error code : 80072F76  
Message: Header information is either corrupted or missing  
Minor error : 28035
```

I can browse to the SQL server mobile agent from my emulator with the same internetUrl in the code snippet without any error

Thanks

SS
