

distributor_admin Issue....But different than normal

I am having the common "distributor_admin does not exist" error when trying to set up a machine as its own distributor. (First time after setting up about 200 distributors). I get this whether I'm doing it remotely, or on the machine itself.

The wrinkle is that the login "distributor_admin" does not exist at all on the potential publisher (who, again, is going to be its own distributor).

Do I need to reinstall MS-SQL to get that login created? Or can I do it by hand somehow?

Or am I barking up the wrong tree?

Thank you!

-Joseph
