If the databases and tables has the same owner, you can get by. But that requires lowering the security. As of sp3, you have to enable cross-database chaining in order to allow this. See the readme for sp3 for more information.

> Hi! I have a little problem with one of my Stored Proc. I don't give any rights to my users on tables but I give execute rights on my Stored Procedures. I'm doing a join on another database (dbo.Orders inner join MS.dbo.Employee) in my stored proc but I have to give Select rights to my users on the table and I don't want to do that. Is there another solution?
