The windows account that Agent uses need to be able to login to SQL Server. You removed the Administrators account from SQL Server, and couldn't login, which indicates that the service account for Agent is Administrator (or some other Windows account which is member of the Administrators group). So far no surprise.

The windows group Power Users are not added as logins to SQL Server by the installation program. Make sure that the service account for Agent has a login in SQL Server and that login has sysadmin permissions in SQL Server.
