Amanda,

Since I am unable to see the original message, I am not sure what trace you are talking about. Anyways, check out if ODBC trace is running (run `odbcad32.exe`) and check on the 'tracing' tab. If so, stop it. More info:

PRB: ODBC Tracing to SQL.LOG Can Slow SQL Server or Consume All Disk Space  
<http://support.microsoft.com/default.aspx?scid=kb:en-us:268591>

> Were you able to delete it? I tried to stop the trace and delete it, but  
unsuccessful. It keeps saying "The process can't access the file because it  
is being used by another process."
