If you look at the list of files in 837957, I can certainly see that the updated files add up to at least 17mb uncompressed.

Keep in mind that a certain patch level does not contain just that patch, but it is cumulative (so that if you thought you needed to apply 918, for example, you wouldn't have to because it's already there). I keep a list of the hotfixes at <http://www.aspsfaq.com/2160> so you can browse through those other KBs to see what other symptoms were fixed between build 760 and build 919.

> Does anyone know a source for the contents of the SQL Hotfix which updates  
SQL2000 to version 8.00.919? I have the hotfix and ran it on a development  
SQL server but I cannot find a definitive list of the contents. I've been  
given one article from microsoft

(<http://support.microsoft.com/default.aspx?scid=kb;en-us;837957>) but I  
believe there are more fixes contained therein (I'd hope so at >17mb). I  
couldn't find anything on knowledge base or technet.
