> I looked at the KB article <http://support.microsoft.com/default.aspx?scid=kb;en-us;241643> and it says set them a SQL user. They were running as my user (NT login member of sysadmin group). So how could I get around this is if I didn't have any SQL logins. I've never tried Win Auth only so not sure I'm probably missing something obvious. Also, isn't the double hop authentication issue a pain in the backside if you only have NT logins?
