Lud,

The below query would give the creation date of the tables whose name starts with RC

```
SELECT crdate
FROM sysobjects
WHERE type='U'
AND [name] LIKE 'RC%'
```

You can schedule a sql job which will find the old ones (use DATEDIFF) and drop them.

```

> I'm new with SQL. I have a CA product that creates every day 44 tables,
always with the same name (RCXXXXX). But this program don't delete this
tables after generate its. I need to delete this tables automatic whent they
became 7 days old. Any one can help?
