Hello all,

I'm working with Windows XP PRO SP1, ASP.NET v2 (with Visual Web Dev) and, MS SQL 2005 with a database with Windows Authentication mode. I've an aspx page which must send a query to the database. But i have this exception :

Login failed for user 'KLEO\ASPNET'.

Description: An unhandled exception occurred during the execution of the current web request. Please review the stack trace for more information about the error and where it originated in the code.

Exception Details: System.Data.SqlClient.SqlException:
Login failed for user 'KLEO\ASPNET'.

I have put TOTAL CONTROL to the ASPNET User for the "wwwroot" folder.

What must i do to resolve this problem?

I dont know how to change the rights of KLEO\ASPNET for the SQL Server. How to do? I'm under MS SQL 2005 Express. There isn't an enterprise manager or visual guide. Have you a command line or something that i could use?

Regards.
