try attached

rename to .vbs

usage CSCRIPT ScriptAllJobs.vbs <Server> <FileName> <owner>

Server is Source Server where you want to script jobs from
FileName is output file for the script

owner is the new owner of the jobs. either do NULL (which will give make the owner the user who runs the create script) or 'somelogin' ie the NT Login that should be the owner ie 'Domainx\Jobowner' – with the quotes.

hope that makes sense

I had to do a bit of hacking cos a) the owner is hard coded and b) the servername is hard coded (ie replace this with @@ServerName). Not too happy about this, I think I might have missed a DMO Option somewhere

ai

Andy.
