Afternoon All

I have been trawling around for a computer based course to point me in the direction for the 70-228 exam.

I have found loads but wondered if anybody had any experiences that they would like to share, good or bad of any specific courses. I have experience of installing & administering SQL in relation to specific products, so I am not a beginner, but by no means an expert!

I am in the UK so would need it to be available here, any feedback would be much appreciated.
