I've sussed that there's 2 separate sets of entries for server regs in Ent Manager:

HKEY\_CURRENT\_USER\Software\Microsoft\Microsoft SQL Server\80\Tools\SQLEW\Registered Servers X

and

HKEY\_LOCAL\_MACHINE\Software\Microsoft\Microsoft SQL Server\80\Tools\SQLEW\Registered Servers X

Any entries in the second location are shown if you untick the "user independent option" i.e this tick box tells EM whether to look in HKEY\_CURRENT\_USER (private) or HKEY\_LOCAL\_MACHINE (shared).

Question is how do you copy all the entries from the private structure into the public one?
