Hello all,

Not having much joy finding information about the following errors that are appearing in the Event Viewer under Application:

Event Type: Error

Event Source: MSSQLSERVER

Event Category: (2)

Event ID: 17055

Date: 04/01/2005

Time: 14:37:09

User: N/A

Computer: SQ01

Description:

17066 :

SQL Server Assertion: File: <proc.c>, line=1576

Failed Assertion = 'm_activeSdesList.Head () == NULL'.

Event Type: Error

Event Source: MSSQLSERVER

Event Category: (2)

Event ID: 17055

Date: 04/01/2005

Time: 14:37:09

User: N/A

Computer: SQ01

Description:

17310 :

SqlDumpExceptionHandler: Process 3400 generated fatal exception c000001d

EXCEPTION_ILLEGAL_INSTRUCTION. SQL Server is terminating this process.

Both errors tend to happen quite a bit, and my Application Event log is chokka with them.

Can anyone assist? If I've got the wrong newsgroup I do apologise, and please point me to the correct one.

Thanks :-)

Peter
