: Yes and yes.

Thanks for responding...

I only asked one closed-end question. Can I get some pointers on getting
this done? You might want to review my response to the other responder.
Examples would be great but research material and knowing what to look for
would be fine too.

:

: You just use the connection.execute mysqlscriptstring

:

: You've just got to connect to the database with an account
: that has enough priviledge to run your script.

How are the scripts that Enterprise Manager can create from an existing
database used to recreate this structure on a different server?
