HI Dan Guzman,

Thanks for the reply... but it is not solving my problem..

I am looking some thing like this, which we do it on oracle..

file master.sql contans

@test1.sql

/

@test2.sql

/

@test3.sql

...

@test20.sql

onces i exeute the master.sql file it executes all the files from test1.sql

.. 20.sql..

which help me in the instalation process. i am looking some thing like this

form

OSQL – ISQL ..

i give one file to the instalation guys and thing are done..

1) can we do the same thing in OSQL or ISQL...,

2) onces i login how do we execute the files.. what is the replacement for @
in MS-sql..

Regards

Govardhan MV
