I have SQL Server 2000 Developer Edition and Windows XP Professional O/S. I installed SQL Server 2000 as the default server, a typical installation, Local system account, with Windows authentication.

The problem is that when I try to open any table in Enterprise Manager, I get a "catastrophic failure" (ODBC error). However, I have no problem opening a table in Query Analyzer. Anybody have any ideas?

I also had a problem trying to import data from an Access database table into a SQL Server 2000 database table using DTS Import Wizard. I have a feeling that the two problems are related.

Any help will be greatly appreciated, thanks!
