This issue was also posted by Brian Taylor – Since no solution has been found (as far as I can see), I hereby post the issue again...

I have read (a lot!) of info on how to configure/troubleshoot SQL Mail setup. I have come so far, that I am able to send mail via SQL Server (xp_sendmail), but even though i am using an identical configuration for SQL Server Agent, it is not possible to select an email profile in the "SQL Server Agent" – "Properties" – "Mail Profile" dialog box... The option is simply greyed out!

Quite depressing... :o/

After a lot of reading, I've come to the conclusion, that this probably has something to do with my "mapi32.dll" version. To avoid questions regarding this, my config is as follows:

OS: Windows 2000 Server SP4

Exchange: 2003 SP1

Outlook: 2000

SQL Server: 2000 SP3a

Mapi32.dll: 6.5.7226.0

NOTE! I am running SQL Server, ISA Server and Exchange Server on the same computer! (SBS configuration)

Any help is most appreciated...

Thank you in advance,

K.
