Hi-

I have been trying to get a silent SQL SERVER Express install to work on 2008 and was wondering if anyone had any luck. I can't even get the license and reboot to be suppressed. Any ideas?

I've tried

```
setup /qn
setup /settings C:\setup.ini
setup /qb /ACTION=Install /FEATURES=SQL, AS, RS,IS,Tools,BIDS,BOL
```

Thanks
D

I've made some progress with this command

```
setup /q /ACTION=install /FEATURES=SQL /INSTANCENAME=TEST /
SECURITYMODE=SQL /SAPWD="sensor" /SQLSVCACCOUNT="NT AUTHORITY\LOCAL
SYSTEM"
```

but keep getting an error,

The following error occurred:

Invalid or missing username or password. To continue, provide valid credentials for the Database Engine service.

Error result: 0x84B40000

Result facility code: 0x4B4

Result error code: 0x0000

Any ideas?
