Data Analyst III

We're looking for a Senior Data Analyst to work on a critical project for the leading technology company in eDiscovery. Successful candidates will have at least four years of industry experience and a Bachelors Degree with strong data analysis and T-SQL background. This is a really fun position for someone who loves data! Don't miss this opportunity to bring your expertise to an interesting and challenging project.

Additional responsibilities include:

- * Design, develop, implement and document repeatable processes (scripts) required to handle requests by the user base and fellow technicians
- * Primary data owner of million+ row staging and production databases
- * Manage introduction and selection processes
- * Search/date/file-type analysis
- * Review management and technical recommendations to Project Managers and clients
- * Clarify, confirm and implement client processing and reporting requests
- * Coordinate with project management, development, hosting, and other operations teams to manage review environment performance
- * Envision, design and document technical and process improvements
- * Coordinate testing of database upgrades and new releases
- * Work with IT to monitor throughput of network and disk subsystems attached to database processes
- * Mentor fellow staff in T-SQL; formal classes and ad hoc
- * Quality control and active member in the quality improvement process
- * Liaison with other departments to monitor quality of data interfaces
- * Data consistency and integrity verification

To qualify, you need a Bachelor s degree in Mathematics, Computer

Data Analyst III: Contract Position with SolutionsIQ in Kirkland, WA
