A lot of that functionality can be replaced by templates that you can add yourself. Open Template Explorer and right-click on the top node, select New > Template.

Also, if you are just looking for a quick syntax help, you should check Dynamic Help window. To open it click Help > Dynamic Help menu option. Once the window opens, you can dock it somewhere in the Management Studio shell. As you type in an editor, you will see links to help topics that relate to what you just typed, including syntax help for T-SQL.

Hope that helps.

Regards,
Maciek Sarnowicz
