Marc Scheuner (no.spam@xxxxxx) writes:

I would like that too! But I never found it irritating enough to bitch about it during the beta programme.  
You can right-click in the query window and select "Open in Object Browser".

Care to open a request for that? ;-) (I'm sure it carries more weight when it comes from a SQL Server MVP, rather than a newbie)

Nah, you do it! The tools team probably moan every time they hear my name by now!

And for me it is just a mild irritation.

Now, this is one I have bitched severly about! Without reward.  
<http://lab.msdn.microsoft.com/ProductFeedback/viewfeedback.aspx?feedbackid=b28b4a47-fb76-42aa-a882-94b9ba891b14>  
that you can vote for.

Done. Let's hope SQL Server 2005 SP2 will include those fixes !!

Alas, there is no indication that "no prompt on exit" is going to materialise.

The problem is that it is a very odd behaviour for an editor. But it was just right in QA, because QA is not an editor for me. I use QA for ad hoc queries. Editing code I do from Textpad.

Overall, it appears that MS forgot about the DBAs when they brought in Visual Studio.
